11/12/20

Write a C program for displaying text in different sizes, different colors, different font styles?

```c
#include<stdio.h>
#include<graphics.h>
#include<dos.h>
void printMsg()
{
 int gdriver = DETECT,gmode,i;
initgraph(&gdriver,&gmode,"C:\\Turboc3\\BGI");
 for (i=3; i<7; i++)
    {
        setcolor(i);
        settextstyle(i,0,i);
         outtextxy(100,20*i,"Welcome");
        delay(500);
    }
    delay(2000);
}
int main()
{
    printMsg();
    return 0;
}
```

Output:

Welcome
Welcome
Welcome
Welcome
Welcome
Welcome
Welcome
